

Foreign Animal Disease Monitoring with the *Squeal on Pigs!* Campaign

Ariel Mixon¹, Dana Cole¹, and Michael Glow¹

¹USDA-APHIS-WS National Feral Swine Damage Management Program, Fort Collins, CO 80521

Squeal on Pigs! Workflow

- Public report on app/web
- Report validated and triaged by local partners
- Valid reports shared with all partners
- Partners facilitate collaborative response

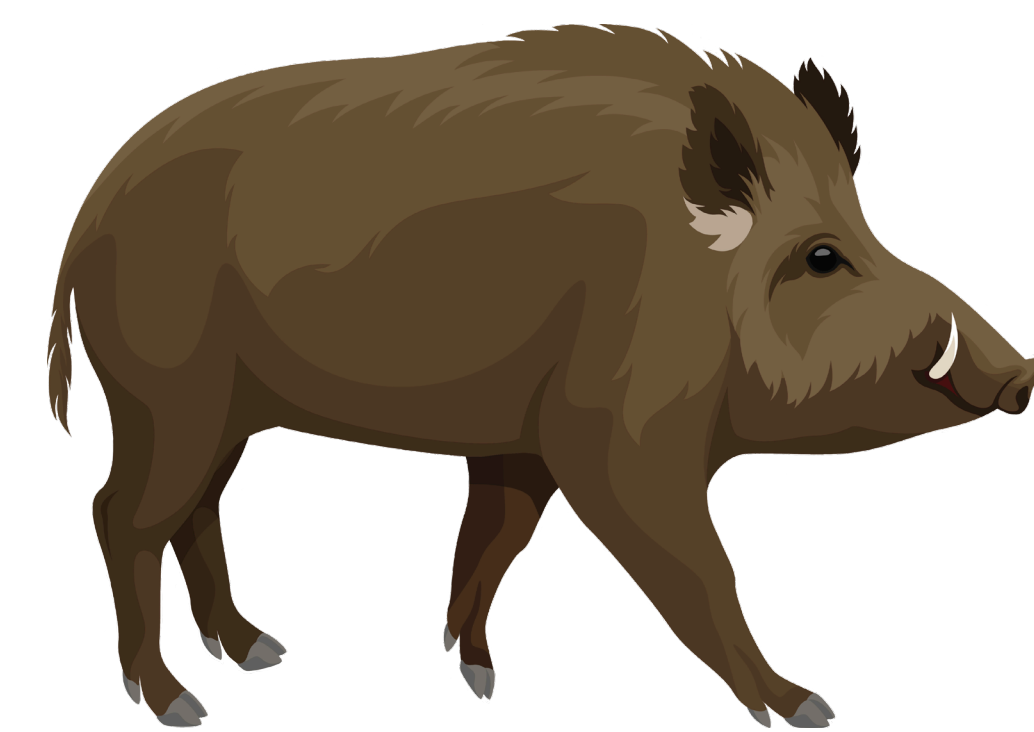

SCAN ME

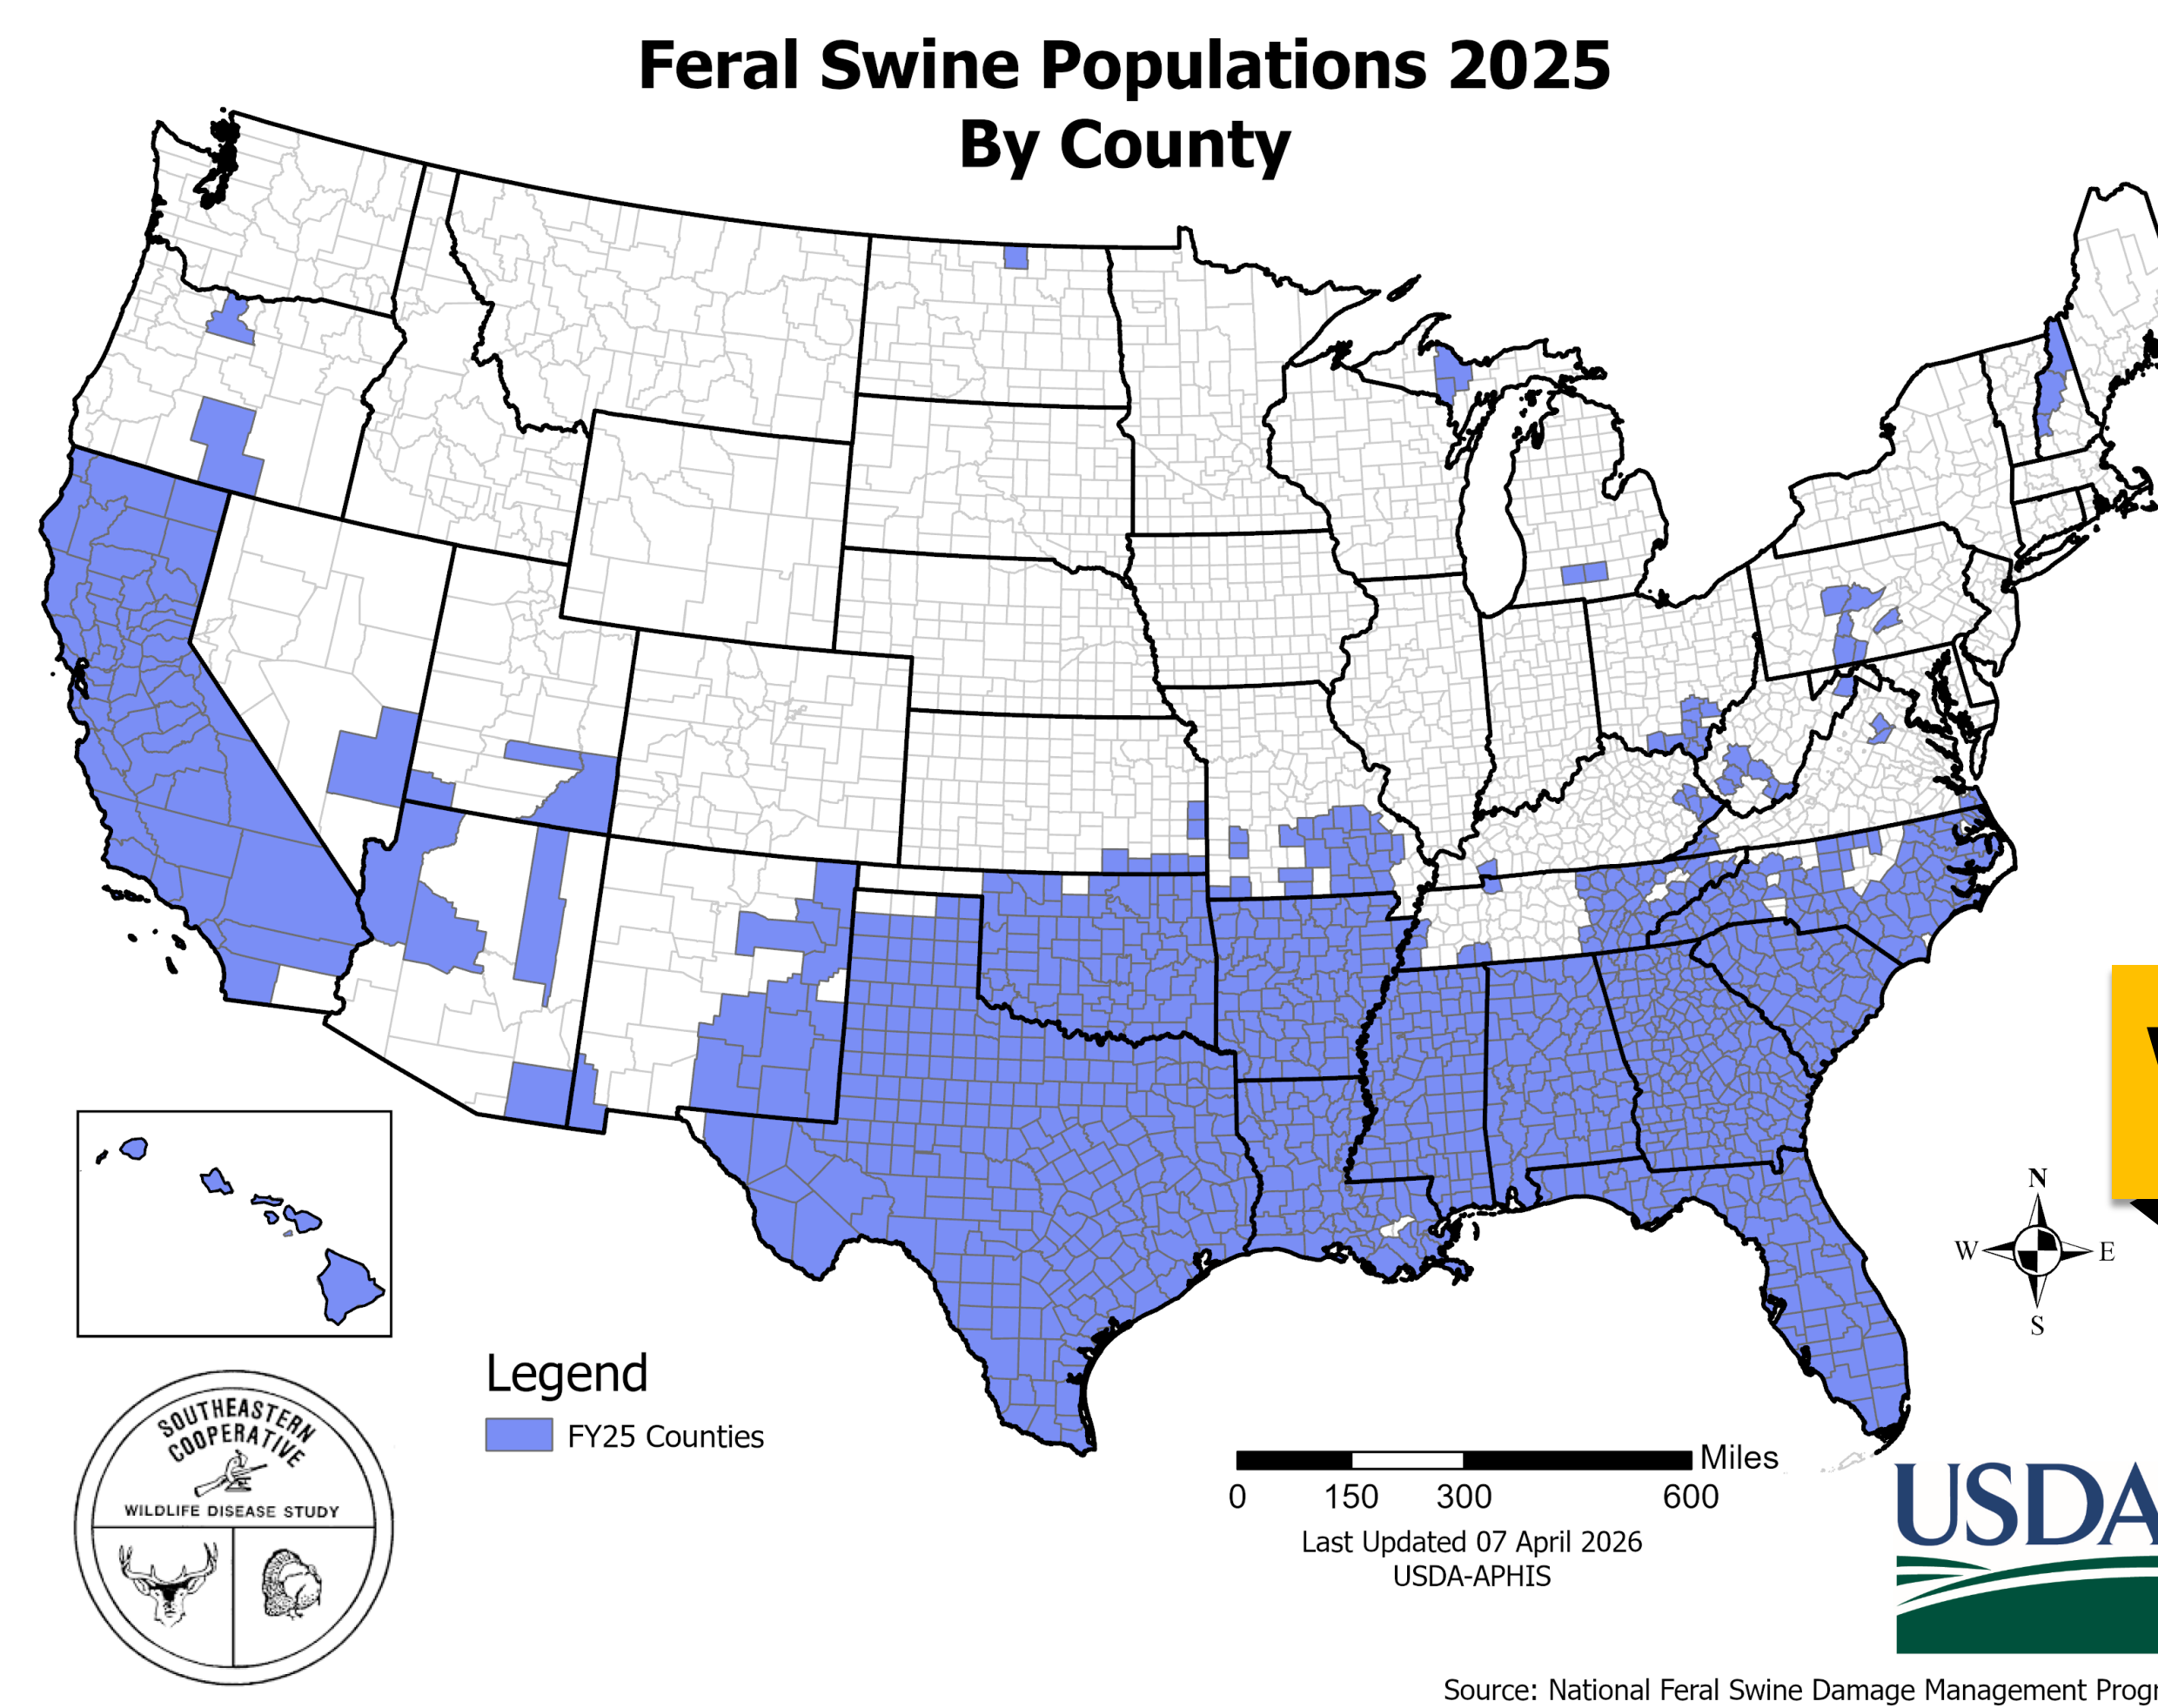

Why a Collaborative Effort?

- Animals don't acknowledge political borders
- Detection of certain diseases could have significant trade impacts
- It takes landscape level effort to successfully reduce feral swine

We need to work together!

EDDMapS
Early Detection & Distribution Mapping System

Why is surveillance important?

In States without established populations

- Quickly identify new introductions
- Expedite removal
- Increase public awareness and accountability

In States with established populations

- Public reporting of morbidity and mortality
- Aid early detection of swine disease outbreak
- Adapted to aid in an emergency foreign animal disease response

Feral swine are a threat to domestic swine,
potentially spreading diseases with serious trade implications
